HEATCRAFT ANNOUNCES CO₂ SYSTEMS TRAINING

Heatcraft is pleased to announce its first round of industry CO₂ training will commence in August, 2018. The training is open to refrigeration contactors and consultants who are interested in specifying, selling, installing, commissioning and servicing CO₂ systems.

The content will provide first-hand experience for all participants to gain an understanding of CO₂ Refrigeration technologies providing hassle-free installation, start-up and operation.

The application training will be provided by Heatcraft subject experts at the Heatcraft Milperra, NSW training facility. Attendees will also receive product application training and first hand installation tips through technological and commercial partners.

Lead presenter and course coordinator Douglas Herkess (Heatcraft Australia, Segment Engineer) commented;

“Whilst there will be a significant focus on Transcritical CO₂ technology our goal is to position this training allowing knowledge building for all levels of contractors that are considering the use of CO₂ refrigeration systems.”

“We are in a unique position at Heatcraft to be able to reach out to facilitate training through our extensive customer base of contractors. We have a local manufacturing facility where we can demonstrate processes and configurations and we have local experts to share the knowledge.”

“We have been designing and manufacturing CO₂/134a Cascade Racks since 2009, so we have extensive experience. With the successful manufacture and installation of our first two eCOBoost Transcritical Systems combined with learnings from our Heatcraft Worldwide global partnerships, we have a comprehensive program that we can roll-out.”

“We are excited to be embarking on our first training session and will schedule ongoing courses dependent upon customer interest.”

Your HVAC&R Business Partner

Contractors interested in attending should forward their expression of interest to training@heatcraft.com.au or contact their Heatcraft representative on 13 23 50.
