

Kirby serves up a fresh solution for Sushi Train

Serving the highest quality fresh food is a key element of the Sushi Train success. With the current Australia and New Zealand franchise covering 30 outlets, all Sushi Train restaurants strictly adhere to the traditional Sushi Train policy of providing totally fresh food and delicious sushi at the best value for money.

When established Heatcraft customer R&S Refrigeration took on the refrigeration specification for the Sushi Train warehouse at Alexandria, they looked to the trusted Kirby range to provide the solution.

Bob Macken of R&S Refrigeration, recalled; "We needed quality, proven equipment and timely delivery. We have enjoyed a successful and long relationship with Heatcraft, so we had expectations that they could provide the solutions once again".

Heatcraft Sales and Application Engineer, Brad Farrell utilised the Heatcraft Innovations Centre to demonstrate the proposed Kirby equipment to R&S Refrigeration as well as to Sushi Train management.

"They were very impressed with what they saw and being able to view the product operational sealed the deal", said Farrell. "They were particularly impressed with how quiet the Dorin compressors were and the smoothness of the system in operation. We had another competitor quote the job, but in terms of the features, Kirby units proved better value for money."

Heatcraft combined Titan Polar Pack Condensing Units, with Dorin Semi Hermetic Basic Units. The Kirby Titan Polar Packs are well regarded for their impressive capacity combined with a small footprint. Kirby 9000 Evaporators were also specified and offered the benefits of being easy to install and service, with their front opening access panels and simplified wiring.

Being able to supply a temperature monitoring system to support HACCP compliance was the final key requirement of the project and Heatcraft met this need with the Dixell XWEB500. The XWEB500 includes innovative features and powerful memory with both intranet/internet remote connection and compatibility with wireless modules.

As a result of the Sushi Train success Heatcraft Australia has further strengthened its relationship with R&S Refrigeration. The broad Heatcraft product offering enabled the complete specification to be supplied and efficiently delivered in a relatively short time frame. Further project work continues with R&S Refrigeration.

At a glance...

The Business Need:

Quality proven equipment, temperature monitoring for HACCP compliance and timely delivery.

The Solution:

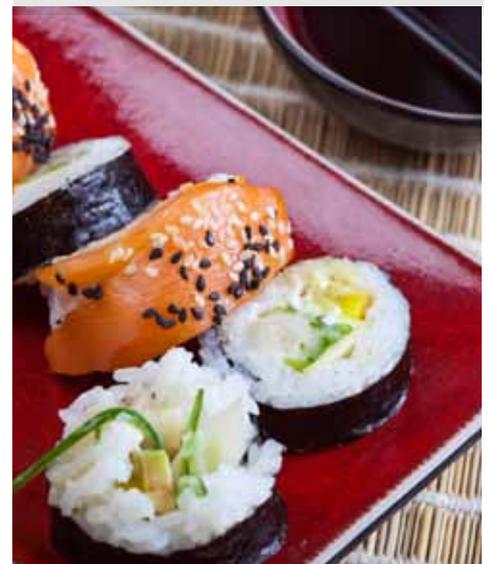

Heatcraft fitted the project with Titan Polar Pack Condensing Units which utilise quiet, efficient Dorin compressors. Kirby 9000 Series evaporators offered easy installation. Monitoring was handled by the Dixell XWEB500 monitoring system.

Why Heatcraft?

Heatcraft are your refrigeration equipment specialists with trusted Kirby equipment, that is feature packed, making installation fast, easy and economic.
